Errata
On page 87 where it reads “in terms of enhancing availability” it should read as “in terms of enhancing acceptability”. In addition, the following bullet points should be included.

In terms of enhancing availability

- Policy makers at regional and district levels together with THB would need to ensure the availability of amenities such as tap water supply, electricity and network connection (for cell phone) in health posts.
- Since counselling during ANC enhances women’s use of skilled delivery, intensive training on proper counselling should be provided to nurses, midwives and HEWs followed by supervision.
- Tailored messages regarding provision of counseling and advice for pregnant women need to be developed and distributed to the community in the form of leaflets.
- Mechanisms for ensuring proper monitoring and evaluation of quality of the information gathered need to be discussed in order to enhance the quality of data collected that will allow us to assess progress.

In terms of enhancing accessibility

- Mechanisms need to be designed to integrate all involved actors with policy makers (through multidisciplinary approach) for building roads and organizing transport facilities that enhances service accessibility mainly to remote localities.
- Through THB collaboration, all actors need to be involved to create a strong linkage for the implementation of well designed, coordinated, and feasible referral systems at all levels.
